
RAZ Systems Hugging Face Deployment Document

Pre-Deployment:

Go to Raz directory under `agentic/1_BaseSDK`

Add `linkedin.pdf` document

add `resume.txt`

Go to `app.py`

1. Replace the name with yours `self.name = "Ajaz"`
2. Replace the line with your pdf file `reader = PdfReader("raz/ajaz.pdf")` with `linkedin.pdf`
3. Replace the line with your txt file `with open("raz/RazSystems.txt", "r", encoding="utf-8") as f:`
With `resume.txt`

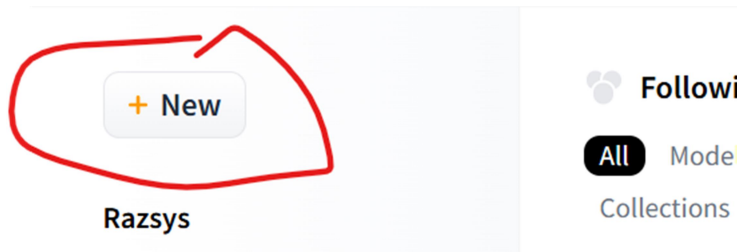

Deploying a Gradio + OpenAI App to Hugging Face Spaces

What Hugging Face Spaces needs from you

your-space/	
├── raz/	← resource folder
├── app.py	← your Gradio app
├── requirements.txt	← dependencies only your app needs
└── .env	← ✗ NEVER upload this — use HF Secrets instead

Step 1 — Create a new Space on Hugging Face

1. Go to huggingface.co → click **New Space**

2.

3. Fill in:

- **Space name** — e.g. <<FirstName>>-support

**Note : <<FistName>> you first name
rest accept default**

- **SDK** — select **Gradio**
 - **Hardware** — CPU Basic (free tier, enough for API calls)
4. Click **Create Space**

HF creates a git repo at:

https://huggingface.co/spaces/YOUR_USERNAME/YOUR_SPACE_NAME

Step 2 — Add your OpenAI API key as a Secret

⚠️ Never put your .env file or API key in the repo — it becomes public.

1. Go to your Space → **Settings** tab
2. Scroll to **Repository Secrets**
3. Click **New Secret**
 - Name: OPENAI_API_KEY
 - Value: sk-proj-...
4. Click **Save**

5. Similar do for rest 3 PUSHOVER Keys list below

Variables and secrets ⓘ

Variables Public

No variables

Secrets Private

OPENAI_API_KEY · Updated 2 minutes ago Replace Delete

PUSHOVER_USER · Updated 1 minute ago Replace Delete

PUSHOVER_TOKEN · Updated 1 minute ago Replace Delete

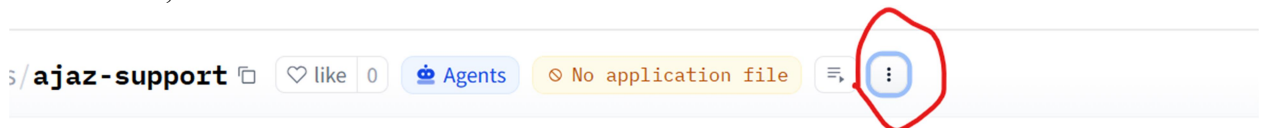

PUSHOVER_EMAIL · Updated less than a minute ago Replace Delete

What does this page say about "Secrets"? New variable New secret

HF injects this as an environment variable at runtime.

3) Copy files

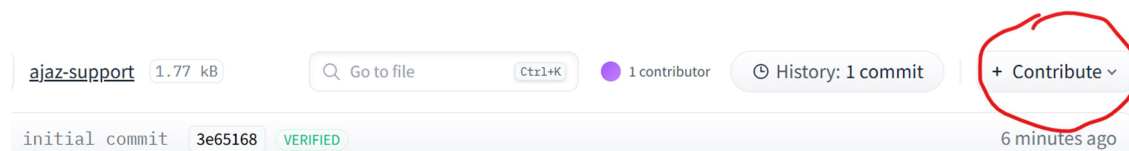

a) Click 3 dots,

b) click files

c) click Contribute

a. Upload files

d) under agentic/1_BaseSDK

Drag and drop

i) app.py

ii) requirements.txt

iii) raz folder

Not needed for this assignment

Step 3 — Create `requirements.txt`

In real project you use below command to create requirements file
pip freeze > requirements.txt
