

With over 30 years of experience in the technology and research sectors, I bring a rich blend of academic, technical, and leadership expertise. My journey began in Computer Science, with early roles at the Raman Research Institute and as a visiting lecturer at Bangalore University. I then coordinated GIS initiatives in Qatar, focusing on land surveys and building permits. As a Team Lead at Compaq Computers, I specialized in Product Information Management (PIM). Currently, I manage operations at Raz Systems and serve as a Software Engineer at the International Organization, leading financial software development initiatives.
